

Rei Tang is the climate change program officer in the Policy Programming Department at the Stanley Foundation. His work is focused on employing international policy analysis and dialogue to keep global warming under 1.5 degrees Celsius through. Specifically, Tang's work involves identifying and advancing transformational pathways, catalyzing non-state and subnational climate action, and fostering cooperation among frontrunner coalitions and between climate action and justice. Since joining the Stanley Foundation, Tang has worked on multilateral issues spanning topics such as nuclear security, prevention of mass atrocities, emerging and established powers, and multistakeholder approaches to global governance. Prior joining the Stanley Foundation, Tang worked at various think tanks analyzing US foreign policy and national security in Washington, DC.
